

## Caffeine Hair Growth Tonic Liquid

Increases hair density  
Promotes the growth phase of the hair roots  
Prevents hair loss

With regular use of Caffeine Hair Growth Tonic Liquid a visible increase in hair density can be achieved, as evidenced by independent studies.

Caffeine Hair Growth Tonic Liquid is a highly effective combination of caffeine, biotin (vitamin H), linoleic acid (Vitamin F), tocopherol acetate (vitamin E) and D-panthenol (pro-vitamin B5).

Caffeine increases the microcirculation and thus the nutrient supply to the scalp. It activates the hair roots and the cell division, improves hair growth, extends the growth phase and protects the scalp from the harmful effects of testosterone. Encapsulated in the liposome carrier system, the highly effective active complex is transported into the hair shaft and hair follicle where it can develop its full spectrum. Biotin has a positive effect on the metabolism of keratinocytes, as long as it can be transported into the deeper hair roots (papillae). Linoleic acid (Vitamin F) contained in high concentration in the membranes of liposomes, acts as carrier system and plays a role in the synthesis of ceramides 1 and 2, which again improve the mechanical stability of the hair. Pro-vitamin B5 has the positive quality to thicken and to regenerate damaged hair by up to 10 percent, while vitamin E acts as an antioxidant, thus slowing the photooxidative degradation process of the keratin and hair pigments.

**Suggested use:** We recommend daily use on dry hair or after hair wash. Using the pipette provided, apply Caffeine Hair Growth Tonic Liquid directly onto the scalp and massage gently. Do not rinse. To complement and support the effect we recommend our Caffeine Shampoo.

**Note:** The product is not effective with genetic or pathological hair loss. Side effects of Caffeine Hair Growth Tonic Liquid are not known.

**Ingredients:** Aqua, Alcohol denat., Panthenol, Lecithin, Caffeine, Tocopheryl Acetate, Biotin, Parfum.
