

## Q10 Body Lotion

With coenzyme Q10, vitamin E and royal jelly

Coenzyme Q10 is indispensable for the body's own production in the cells. The concentration of the coenzyme Q10 reduces in the cells with progressing age or as a result of stress. The skin consequently loses energy, cell reproduction slows down and the first signs of aging such as lines and wrinkles appear. Q10 body lotion with coenzyme Q10, vitamin E, royal jelly and natural oils not only offers your skin extra coenzyme Q10, but also valuable moisture components and vitamins. The skin regenerates more quickly, gains increased firmness and elasticity and becomes smooth and supple. Apply Q10 body lotion as you wish on the entire body, and massage in with a circular motion.
