

## Couperose Spray

Reduces skin redness,  
relieves feelings of tightness

Works specifically against skin redness, relieves feelings of tightness and provides soothing moisture. Couperose is a congenital vascular dilatation, especially in the area of the facial skin. In the initial stage there is only temporary redness, mainly on the nose and cheeks, but sometimes also on the forehead and chin. In the course of time, more and more red veins appear individually or like a web, which eventually lead to permanent redness. The skin is often sensitive and tends to be dry. The active ingredient SILIDINE®, which is extracted from the purple-red alga *Porphyridium cruentum*, acts specifically against this tendency to redness by strengthening the vessel walls, thus helping to reduce skin redness and soften fine veins. A care formula of natural origin calms and protects the skin and strengthens its barrier function against external influences. Betaine and aloe vera provide moisture, freshness and a soft, relaxed skin feeling. Particularly gentle.

**Application:** In the morning and evening after cleansing, spray directly onto the affected skin areas and massage in gently. Avoid contact with eyes.

**Ingredients:** Aqua, Pentylene Glycol, Propanediol, Betaine, Aloe Barbadensis Leaf Juice, Porphyridium Cruentum Culture Conditioned Media, Poria Cocos Extract, Phragmites Karka Extract, Glycerin, Benzyl Alcohol, Potassium Sorbate, Phenethyl Alcohol, Citric Acid, Sodium Benzoate.

Made in Germany
