

## Orthopaedic Mattress Cover

**A comfortable sleep position allows restful sleep.**

The orthopaedic mattress cover made of viscose-elastic memory foam is characterised by its optimum adaptability to the body shape. The cover becomes soft in the shoulder, hip and knee area due to pressure and body heat and dips at these exact points. Further out, the material retains its orthopaedic, supporting property. This keeps the spine straight and a noticeably more comfortable lying position is possible without an unpleasant sensation of pressure. The viscose-elastic memory foam is also breathable and suitable for allergy sufferers.

**Dimensions:** approx. 90 x 200 x 7 cm
