

Royal Jelly in Honey

Creamy

Royal jelly is the fabled sap that the bees produce for their queen. Only she is fed royal jelly all her life, while all other members of the colony have to settle for a mixture of pollen and nectar. Whether royal jelly is the secret of longevity and fertility of the queen bee remains controversial. In any case, the sour-fresh taste blends perfectly with the mild sweetness of the blossom honey, which is harvested in Baden-Württemberg using the art of traditional beekeeping. Our fine, creamy blossom honey contains 2% royal jelly. Gluten-free, lactose-free, vegetarian.

Origin: Germany

Ingredients: Blossom honey, royal jelly (2 %).

Average nutritional values per 100 g:	
Calorific content	1280 kJ/301 kcal
Fat	<0.1 g
