

3-Months-Treatment-Package Epafit Capsules

For the dietary treatment of inflammatory rheumatic complaints
with a high dose of Omega-3 fatty acids
650 mg fish oil
325 mg EPA

Rheumatism is the term used to describe a multitude of illnesses relating to the musculoskeletal system, which can result in symptoms such as joint pain, morning joint stiffness and joint swelling, caused through inflammation processes. Two natural polyunsaturated fatty acids are decisive when it comes to inflammatory rheumatic processes: arachidonic acid, an Omega-6 fatty acid and eicosapentaenoic acid, an Omega-3 fatty acid also known as EPA. The current emphasis on meat in today's diet means that it is predominantly the Omega-6 fatty acid, the so-called arachidonic acid, that is absorbed. This is responsible for forming increasing numbers of inflammatory materials and increasing inflammatory rheumatic complaints. EPA (eicosapentaenoic acid), on the other hand, counteracts arachidonic acid, and inhibits the formation of these unwanted substances. Switching to a fish-rich diet with a high proportion of Omega-3 fatty acids, in particular EPA (eicosapentaenoic acid) can prevent the formation of these inflammatory substances, and thus improve the general state of health. However, it is almost impossible to guarantee the provision of the required daily amount of Omega-3 fatty acids through a fat-rich fish diet alone. As such, it is sensible to supplement the diet with Omega-3 fatty acids, to which EPA (eicosapentaenoic acid) belongs.

Ingredients: Omega-3-concentrate made of Fish Oil, Gelatine, Glycerin humectant, Vitamin E, Sunflower Oil.

Average nutritional values	per capsule	per 2 capsules	per 3 capsules	per 100 g
