

## Propolis in honey

Creamy

Propolis is a pleasant-smelling, tasty bee product. Bees collect resins from different trees and turn them into propolis in a mysterious process, together with pollen, wax and their own enzymes. Propolis protects the bee hive in a number of ways as a putty resin. Propolis was valued by people in ancient times, not least due to its pleasantly bitter taste. The best way to enjoy propolis is in combination with honey. Our fine, creamy blossom honey, which is German in origin, contains 2 % propolis - the perfect dose to support the body in a positive manner. Gluten-free, lactose-free, vegetarian.

**Ingredients:** Blossom honey, propolis (2 %).
